

# Custom Skincare Builder - Flow Chart

This flow chart illustrates the end-to-end process of the custom skincare formulation app. It covers user interactions, backend processing, and output generation for client-ready product formulations.

## Key Use Cases:

1. Basic User Flow – User selects ingredients → request saved/logged.
2. Formulation Guidance – System suggests safe % based on ingredient logic.
3. AI-Powered Flow – GPT generates customized formulation + notes.
4. Document Output – Auto-generated PDF for user.
5. Backend/Admin – Data stored in database or sent via email.
